Professional Summary

Software Developer with 2.5+ years of hands-on experience in full-stack web development using React.js and Node.js. Proven track record in delivering scalable web applications, RESTful APIs, and collaborating in Agile teams. Passionate about building performant products and continuous learning.

Education

NIET Greater Noida **2020 – 2024**
Bachelor of Technology in Computer Science, GPA - 7.98 *Greater Noida, UP*

Raghuvar Prasad Jaiswal Saraswati Viddya Mandir **2018 & 2020**
Secondary Percentage - 82.67 / Senior Secondary Percentage - 70.40 *Siddharth Nagar, UP*

Technical Skills

Languages: HTML/CSS, TypeScript, JavaScript, Java, Python
Frontend: React.js, Hooks, Context API, Responsive UI, Performance Optimization
Backend: Node.js, Sails.js, REST API Design, WebSockets, JWT Authentication, OAuth, Microservices Architecture
Databases: MySQL, PostgreSQL, MongoDB, Redis, Neo4j
Tools: Git, VS Code, Cursor, IntelliJ IDEA, Jupyter, AWS S3
Concepts: System Design, Caching (Redis), Async Processing (BullMQ), API Rate Limiting, Load Testing, Scalable Architecture
Specialized: BullMQ, Socket.io, XRPL Integration

Projects

Kivo Eye – SSWL (Smart Wheel Line Monitoring) | *PLC, Modbus TCP, Cron Jobs, Email Automation*

- Developed **Kivo Eye**, a **real-time monitoring system** for a wheel paint-shop production line to track production, inspection, loading and line status.
- Built a **real-time operator dashboard** showing production counts, active models, colours, conveyor status and inspection results.
- Integrated **PLC systems via Modbus TCP** to monitor conveyor running/stopped status and detect line events.
- Built **production and loss reporting**: downtime, loss reasons, hourly output, OK/rejected quantities, lot tracking.
- Automated **email notifications and reports** for conveyor stops, production losses, shift summaries and exceptions.
- Added **audit and data-quality tracking** for missed rims/hangers, model corrections, production runs, inspections.
- Implemented **scheduled cron jobs** for shift changes, automating lot handling, reports and email notifications.

Bot Application Simulation | *Node.js, REST API, Load Testing, UI* **Source Code**

- Developed a versatile bot to simulate API interactions including load testing, stress testing, and endpoint validation.
- Designed configurable test scenarios with custom payloads, request patterns, and concurrency support.
- Enabled detailed logging and automated reporting for performance benchmarking and issue tracing.

MedRisk – AI Risk Management Automation Platform | *FastAPI, React, TypeScript, PostgreSQL, LLM, AWS S3*

- Engineered **AI-driven risk management workflows** including hazard analysis, FMEA (design/user/process), and automated risk reporting.
- Built scalable **FastAPI-based REST APIs** with **PostgreSQL, SQLAlchemy, and JWT authentication**, supporting async processing and large file handling.
- Developed a **React + TypeScript admin dashboard** with multi-step workflows, real-time status tracking, and UX optimized for long-running AI operations.
- Integrated **LLM-based multi-agent orchestration** for generating structured regulatory documents aligned with **ISO 14971** standards.
- Implemented **document ingestion pipelines** (PDF/DOCX, AWS S3) and version-controlled conversational outputs for traceability.
- Improved system reliability with **retry mechanisms, error handling, and workflow state management** for AI job execution.

Experience

W3villa Technologies Pvt. Ltd. **April 2024 – Current**

Software Developer *Noida, India*

- Worked on two core products: a Node.js affiliate MLM-based application and a real-time QnA game using sockets.
- Architected and developed **10+ microservices** for a scalable MLM platform with real-time gaming and affiliate reward distribution.
- Both applications were built using a **microservices architecture**, enabling independent deployment, scalability, and better maintainability.
- Implemented **asynchronous job processing** using BullMQ for affiliate rewards and background workflows.
- Integrated **XRPL network** for rewards and prize distribution, enabling secure and efficient transfers.
- Optimized performance using **Redis caching** and database tuning, improving API response time by **40%**.
- Built the **Affiliate MLM Admin Panel** from scratch using React.js with modular components, role-based routing, and dynamic dashboards.
- Developed and scaled multiple RESTful APIs and backend services, optimized for high traffic and auto-scaling under load.

Certifications

Flipkart GRiD 5.0 - Software Development Track **July 2024**

Certificate of Participation, Level 1.1: E-Commerce & Tech Quiz *Flipkart*

Data Structures - Coursera **March 2022**

Course Certificate, University of California San Diego (22 hours) *View Certificate*
